

Acme Subscription Platform

RAG Test Knowledge Base — Dataset 2

1. Subscription Plans

Acme offers Starter at \$19/month for up to 3 team members, Growth at \$49/month for up to 15, and Enterprise at \$129/month for up to 50. All plans include email support. Growth and Enterprise also include priority support.

2. Plan Changes

Upgrades take effect immediately and charge a prorated amount for the remainder of the current billing period. Downgrades take effect at the start of the next billing period and do not create an immediate refund.

3. Billing

Monthly subscriptions bill on the subscription creation date. Annual subscriptions receive a 15% discount compared with twelve monthly payments. Invoices are generated at the beginning of each billing period.

4. Trials

New customers receive a 14-day free trial. A payment method must be added before the trial begins. If the customer does not cancel before the trial ends, the selected plan automatically becomes paid and the first billing period is charged.

5. Cancellation

Paid subscriptions can be canceled at any time. Cancellation stops the next renewal, while access normally continues until the end of the already-paid billing period. Trials can be canceled before ending to prevent conversion.

6. Refunds

Subscription refunds are available within 7 calendar days of a charge when premium features have not been used during that period. Approved refunds return to the original payment method and usually appear within 5–10 business days after approval.

7. Team Members

A team member is an active user with workspace access. Removing a user immediately frees a seat. Invited users who have not accepted their invitation do not count toward the plan limit. The workspace owner always counts as one active user.

8. Storage

Starter includes 20 GB, Growth 100 GB, and Enterprise 1 TB. Deleted files remain in the trash for 30 days and continue to count toward storage until permanently deleted.

9. API Limits

Starter allows 1,000 API requests/day, Growth 10,000/day, and Enterprise 100,000/day. Requests receiving a 429 rate-limit response do not count against the daily quota.

10. API Authentication

API requests use bearer tokens in the Authorization header as 'Bearer '. Tokens must not be placed in URL query parameters. A workspace can have up to five active API tokens.

11. Webhooks

Failed webhook deliveries are retried up to three times, approximately after 1 minute, 5 minutes, and 30 minutes. A 2xx HTTP response is required for success. After all retries fail, the event is marked delivery failed.

12. Data Export

Workspace owners can request a full export from administration settings. Generation normally takes up to 24 hours. A completed export is available for download for 72 hours; afterward the link expires.

13. Roles

Roles are Owner, Admin, and Member. Owners can manage billing, delete the workspace, and change roles. Admins can manage users and settings but cannot change billing or delete the workspace. Members cannot manage users or billing.

14. Security

If an API token may be compromised, the owner or admin should revoke it immediately and create a replacement. Revoked tokens stop working immediately. Record the token ID and approximate discovery time.

15. Account Deletion

Deleting a workspace permanently removes files, users, subscriptions, and API tokens after a 7-day recovery period. During that period the owner can restore the workspace. Afterward deletion cannot be reversed.

16. Support

Starter has a target first response within 2 business days, Growth within 1 business day, and Enterprise within 4 business hours. These are response targets, not guaranteed resolution times.

17. Notifications

Owners and admins can configure workspace-wide email notifications for billing, security events, and failed webhooks. Members cannot change these settings. Individual users can manage optional product-update emails.

18. Workspace WS-4821

Workspace WS-4821 belongs to customer CUST-731 and uses Growth. It has 11 active users, 84 GB of storage in use, and 3 active API tokens. Its latest invoice is INV-90517 for \$49. It has one account-level webhook endpoint.

19. Token tok_live_7F92

Token tok_live_7F92 belongs to WS-4821, was created by the owner, and is active. It was last used by the reporting service. If suspected compromised, revoke it immediately and replace it.

20. Export EXP-30018

Export request EXP-30018 belongs to WS-4821. It completed at 10:00 UTC on June 12, 2026. Its download link remains available until 10:00 UTC on June 15, 2026, unless otherwise invalidated.
